THE MENTORS

EXPERTS

Ricardo Tellez, CEO

**Alberto Ezquerro,
Head of Education**

**Miguel Angel Rodriguez,
Head of Research**

**Rodrigo Gonzalez,
ROS Developer**

THE MENTORS

EXPERTS

Bayode Aderinola,
ROS Web & Support Engineer

Takavarasha,
Teacher Assistant

Girish Kumar,
Teacher Assistant

YOUR TUTOR

During the Masterclass program you will have a tutor responsible for guiding you through the whole process.

Your tutor will assign you tasks, evaluate your progress and push you to complete the program successfully.

You will also have a monthly meeting with your tutor to discuss your status and progress. You will agree with your tutor on the best day/time to have this monthly meeting.

SUPPORT

All Masterclass students have access to a Discord server where they will be able to interact with other students and with the Experts.

The Discord server is organized in different categories:

Depending on the current Phase of the Masterclass you are in, you have to place your questions/comments in the corresponding Discord channel.

Discord will also be used as the main channel to establish communication with your tutor. You will also find here general announcements (ie. special events, statements...) of the Masterclass.

STUDY PLAN

The Masterclass is designed so that you can complete it at your own pace. However, the recommended (and fastest) pace is to complete it in 6 months.

To complete it in 6 months, you should dedicate, at least, 35 hours per week to the Masterclass. This is an average of 7 hours per day. A recommended schedule for each day is shown below:

TIME	TASK
9 h - 13 h	Work on Course
13 h - 13:30 h	Lunch Break
13:30 h - 16:30 h	Work on Project

ROBOTICS DEVELOPER PATHWAY

MASTERCLASS PHASES

STEP-BY-STEP

The Masterclass program is divided into
6 phases, each one of them to develop
different skills.

Robotics Developer NOVICE

1. Git
2. C++ for Robotics
3. ROS2 Basics
4. Robot Modeling
5. ROS2 TF
6. Gazebo Simulator
7. ROS1 Basics

Robotics Developer COMPETENT

18. Web Interfaces for ROS
19. Docker
20. Jenkins
21. Unit Testing
22. Continuous Integration

ROBOTICS DEVELOPER Job-Ready!

Pre-requisites

0. Linux, C++ & Python

Robotics Developer BEGINNER

8. Advanced ROS2
9. Robot Navigation
10. Robot Perception
11. Object Manipulation
12. Build Robot Controllers

Robotics Developer EXPERIENCED

13. Math for Robotics
14. Mobile Robot Kinematics
15. Arm Kinematics
16. Robot Dynamics
17. Path Planning Algorithms

Robotics Developer ADVANCED

PHASE 0: Prerequisites Check

Learn the foundations to start programming. This phase will provide you with the minimum required knowledge in order to complete more complex courses. This Phase must be completed before starting the Masterclass.

- **Courses:**
 - *Linux for Robotics*
 - *Python3 for Robotics*
 - *C++ for Robotics*

PHASE I: Learn the Fundamentals

Boost your robotics programming skills by practicing key robotics concepts such as autonomous navigation, manipulation or perception. Also, boost your ROS2 programming skills.

- **Courses:**
 - *ROS1 Basics (C++)*
 - *Git and GitHub Basics*
 - *Advanced Modern C++*
 - *ROS2 Basics (C++)*
 - *URDF for ROS2*
 - *TF for ROS2*
 - *Gazebo Simulator*

PHASE II: Build Robotics Programming Skills

Boost your robotics programming skills by practicing key robotics concepts such as autonomous navigation, manipulation or perception. Also, boost your ROS2 programming skills.

- **Courses:**
 - *ROS2 Intermediate*
 - *ROS2 Navigation*
 - *ROS2 Manipulation*
 - *ROS2 Perception*
 - *ROS2 Control*

PHASE III: Robotics Theory

Strengthen your foundation by learning robotics theory. Understand the physics and mathematical principles behind any robotic system, from simple kinematics to advanced planning and control algorithms.

- **Courses:**
 - *Basic Math / Probability*
 - *Mobile Robotics Kinematics*
 - *Arm Kinematics*
 - *Robot Control*
 - *Path Planning Algorithms*

PHASE IV: DevOps for Robotics Projects

Learn to use and apply the most important tools and procedures for developing robotics projects. You will learn how to apply continuous integration techniques in real-world scenarios, so you're better prepared to bear the day-to-day work of a robotics developer.

- **Extra Project:** *Build and program your own personal robot. More info in page 17.*
- **Courses:**
 - *Web Programming (HTML, CSS, JavaScript)*
 - *Continuous Integration and Testing*
 - *Jenkins*
 - *Docker*

THE

This will lay the cornerstone for your career as a robotics developer.

PHASE VI: Internship (optional)

Job-Ready

The Robotics Developer Masterclass offers you practical work in one of the world's leading robotics companies.

You will learn from industry practitioners, and enhance your knowledge with relevant work assignments that can help you prepare for your future career as a real Robotics Developer.

EXTRA: Expert Talks

Every month, a different ROS/robotics expert will deliver a talk.

During these talks, the expert will provide highly valuable knowledge based on his own experience over the years as a robotics developer.

These talks will be held on Zoom, and students will be allowed to participate by asking questions to the expert.

EXTRA: Build your personal robot

For Phase 4 of the Masterclass, you will receive a FastBot robot. You will have to build and program the robot.

Building and programming a real robot will provide you with very important experience and will strengthen your skills as a robotics developer.

EXTRA: Build your personal robot

The screenshot displays the 'Robotics Developer Masterclass' web interface. On the left is a sidebar with navigation icons for 'Dashboard', 'Phases', 'Calendar', and 'Discord'. The main content area is titled 'PHASE ROBBOX: REQUEST MY REAL ROBOT!' and features a progress bar with five phases. Phase 1 is active, showing a 'Request FastBot' button. Below this, the 'FastBot' section describes it as a 'ROS-based, learner-friendly mobile robot' and lists five key features: 1. Based on the Raspberry Pi 4 module, supports Python, C++ and ROS 2 programming; 2. Odometry computed by encoders; 3. 360° LIDAR with distance and intensity values measuring up to 12 meters; 4. Raspberry Pi Camera; 5. Hot swap of batteries for uninterrupted functioning. To the right, an 'APPLICATIONS' section lists 'TELEOPERATION', 'MAPPING', 'NAVIGATION', and 'AI ENABLED', with a sub-section for 'Control the robot using Computer Keyboard or Bluetooth Joystick/Gamepad'. At the bottom, it says 'Don't forget to request your FastBot Robot and continue learning!' with an image of the robot.

Robotics Developer Masterclass

PHASE ROBBOX: REQUEST MY REAL ROBOT!

Request FastBot

You've made great progress! Now, request your very own Robot **FastBot** and get ready for the next phases of your robotics adventure.

Request FastBot

FastBot

ROS-based, learner-friendly mobile robot

FastBot is a fully open-source, ROS 2-based wheeled robot kit designed for hands-on learning and robotics teaching.

Learn more at <https://www.theconstruct.ai/fastbot/>

Key Features

1. Based on the Raspberry Pi 4 module, supports Python, C++ and ROS 2 programming
2. Odometry computed by encoders
3. 360° LIDAR with distance and intensity values measuring up to 12 meters
4. Raspberry Pi Camera
5. Hot swap of batteries for uninterrupted functioning

APPLICATIONS

TELEOPERATION

MAPPING

NAVIGATION

AI ENABLED

Control the robot using Computer Keyboard or Bluetooth Joystick/Gamepad

Ecosystem-friendly:

ROS

Don't forget to request your FastBot Robot and continue learning!

After completing Phase 2 of the Masterclass, you will unlock the section that will allow you to request your robot!

EXTRA: C++ Live Training

Additional C++ live training sessions will be delivered every week.

The goal of these extra training sessions is to assist you in the process of learning C++, as well as provide you with extra material in order to boost your C++ skills.

EXTRA: Open Hour Sessions

Additional live support sessions will be held every week.

These extra sessions are designed to help you with more complex questions or issues that may require live interaction.

MANAGE YOUR SUBSCRIPTION

You can pause your Subscription to the Masterclass at any moment. If you do so, you will lose access to the Masterclass material until you resume your subscription again.

To do so, click the **Pause Subscription** button that you will find on My Payments.

The screenshot displays the 'My Payments' section of a user interface. On the left, a sidebar shows the user's profile (Student Name, The Construct Account) and navigation links for 'My Payments' and 'Billing Data'. The main content area features a table with the following columns: PRODUCT, STATUS, NEXT PAYMENT, EXPIRE DATE, and PAYMENT METHOD. A single subscription is listed: 'Robotics Developer Masterclass Batch 5 - 2024 Spring' with a status of 'Subscription Active', a next payment date of 'Feb 10, 2024', an expiration date of 'Feb 01, 2025', and a VISA payment method. To the right of the table, there are two buttons: 'Pause Subscription' and 'Cancel Subscription'. Below the table, a link for 'Need help? Contact us for assistance.' is visible.

PRODUCT	STATUS	NEXT PAYMENT	EXPIRE DATE	PAYMENT METHOD
Robotics Developer Masterclass Batch 5 - 2024 Spring	Subscription Active	Feb 10, 2024	Feb 01, 2025	VISA ****1234 Expires 07/30

Buttons: Pause Subscription, Cancel Subscription

Need help? Contact us for assistance.

THE PLATFORM

The Masterclass App - Dashboard Screen

1. **Dashboard** – Overview of your current Masterclass progress.
2. **Current Phase** – The phase you have reached.
3. **Last Opened Course** – The most recent course you opened.
4. **Continue Course** – Click to continue the last opened course.
5. **Total Completion** – Your overall completion percentage for the Masterclass.
6. **Current Position** – Shows your position within the Masterclass journey.
7. **Progress Comparison** – Compare your progress with classmates.
8. **Set Goal** – Set your robotics career goal here.
9. **Phase Performance** – View your scores across different phases.
10. **Refresh** – Refresh the app to update the latest data.

THE PLATFORM

The Masterclass App - Phases Screen

1. **Phases Overview** – Clear view of your learning path.
2. **Completed Phases** – Phases you have finished.
3. **Current Phase** – The phase you are currently learning.
4. **Locked Phases** – Phases not yet unlocked.
5. **Phase Completion %** – Your completion percentage for the current phase.
6. **Course Info Card** – Click Open Course to start learning.
7. **Section Score** – Your performance in this section.
8. **Completed Courses** – Courses you have finished.
9. **Current Course** – The course you are learning now.

Alberto (Instructor)

8/29/25, 6:26 PM

Hello @everyone. Your robotics journey is about to begin with the Robotics Developer Masterclass!

Get ready for the Opening Ceremony:

📅

Date: September 1st

🕒

Time: 5:00 PM - 6:00 PM CEST

📍

Location: Zoom

🔗

Link: <https://us06web.zoom.us/j/84078152510?pwd=zWpS5fhHhP4aBbafCDvsG57bnpGQoE1>

📋

Explore the Masterclass roadmap and prepare for an exciting journey ahead!

🔴

Attendance is mandatory to ensure a strong start.

See you all there!

THE PLATFORM

The **Course page** will be shown every time you work on a course:

1. **Notebook** – Here you will find instructions to follow to complete the courses.
2. **Code Editor** – Development Environment to edit your programs in a graphical way.
3. **Simulation** – Simulated environment to interact with a robot.
4. **Terminals** – Four different Linux shells to type commands.
5. **Course Toolbar** – Open, minimize, or close any window.
6. **Exit Course** – Close the course.

THE PLATFORM

The **Course page** will be shown every time you work on a course:

1. **Course Name & Progress** – Displays the current course name and completion progress.
2. **Reload Notebook** window.
3. **Course Syllabus** – View syllabus to jump to specific units or navigate between units.
4. **Reload Code Editor** window.
5. **Restart the Simulation** environment.
6. **Reset Robot Position** in the simulation.
7. **Rename Shell** – Give a specific name to the Shell.
8. **Open Shell in New Tab** in your browser.
9. **Reload Shell** – Reload the shell session.
10. **Terminals** – Access terminal window.
11. **Code Editor** – Access Code Editor window.

THE PLATFORM

The **Course page** will be shown every time you work on a course:

12. **Jupyter Notebook** – Access Notebook window.
13. **Simulation** – Open the simulation environment.
14. **Graphical Tools** – Opens an extra window that allows you to visualize graphical applications such as RViz or rqt.
15. **Review Course Notebooks** – Allows you to pre-visualize other notebooks from the same course or other courses.
16. **Report an Error** – Report an issue with the platform.
17. **Forum** – Access the course forum page.
18. **Switch Language** – Automatically logs you out and requires re-login to change the language.
19. **Power Off** – Logout of the platform.

THE PLATFORM

The **rosject** page will be shown every time you work on a Project.

1. **Rosject Name** – Displays the name of the current rosject.
2. **Time Left** – Time left to work on the rosject environment today (resets daily at 00:01 your timezone).
3. **New Terminal** – Open an extra Terminal window.
4. **Real Robot Connection** – Connect to a real robot.
5. **Rosject Size** – Current rosject size (maximum 2048MB, cannot exceed this limit).

MANAGE YOUR WORK

In your Phases Screen, you will have direct access to all the **Phases** of the Masterclass.

Each Phase is composed of different **Sections**.

MANAGE YOUR WORK

Each Section is composed of 1 or more courses, and a **Checkpoint**.

By default, Sections will be **LOCKED**. This means you won't be able to access the courses or checkpoint inside it. In order to unlock them, you have to complete them. As you complete each Section, the next one will be unlocked.

In order to complete a Section, you will have to successfully pass its corresponding Checkpoint.

When you complete all the Sections inside a Phase, the Phase will be considered as completed, and you will get a score for it.

YOUR MARKS

Your final grade for the Masterclass will be computed based on the scores you get for each Phase. You can check your current **Phase Scores in the Scores area**:

Your scores for <i>Master Class: Class of 2023</i>		
Phase	Grade Weight	Grade
Phase 1 (Learn the Fundamentals)	18.00%	8.75
Phase 2 (Build Robotics Programming Skills)	18.00%	0
Phase 3 (Robotics Theory)	18.00%	0
Phase 4 (DevOps for Robotics Projects)	18.00%	0
Phase 5 (Final Project)	28.00%	0
TOTAL Grade Achieved	100.00%	1.57

In order to get a Phase score, you need to complete all the Sections inside that Phase. The Phase score will be computed as an **average** of each Section score.

YOUR MARKS

The score of a Section will be defined by the Checkpoint project.

Checkpoints are small robotics project that will test everything you've learned during a specific Section. Inside a Checkpoint, you will be requested to complete different tasks.

Inside each Checkpoint you will find **Grading Guides**.

These **Grading Guides** indicate what is the expected result of an specific task, and how much points you will be granted if it's completed correctly.

- Grading Guide -

- When running the `localization.launch.py`, the robot is able to properly localize itself when moving around the warehouse - **1.5 points**

▶ Execute in Terminal

In []: `ros2 launch localization_server localization.launch.py`

▶ Execute in Terminal

In []: `source /opt/ros/noetic/setup.bash
rosrun teleop_twist_keyboard teleop_twist_keyboard.py cmd_vel:=/robot/cmd_vel`

- End Grading Guide -

YOUR MARKS

In some Checkpoints, you will find **sections** like the following:

1.2 Test everything in the real robot lab

Now it is time that you test your program with the real robot.

1. Book a 1h session of the RB-1 real robot lab.
2. On the day and time selected, open this rosject and connect to the real robot.
3. Launch the `ros1_bridge` to have the proper ROS2 topics available.
4. Then execute your program and create a map of the real warehouse.

- NOTES -

- If your program doesn't work, check first if the topic names that you are expecting do exist with the same name in the real robot.
- Then check if the frames of the real robot are the same as the ones of the simulation. For that use `Rviz2`
- **Limit the real robot velocity to 0.1 m/s**

- END OF NOTES -

Whenever you find these sections inside a Checkpoint project, you will have to **test that your programs work in the real robot**.

In fact, the evaluation of the Checkpoint will be made using also the real robot. You can find more details about the Real Robot Labs in the next sections.

YOUR MARKS

When you are finished with a Checkpoint and it's ready to be evaluated, click on the **Request Grading** button. A reviewer will evaluate it within the following 24 hours and provide you with a score. You will have 3 trials to send a checkpoint for grading if you want to improve your mark. After that, your mark will not be updated again.

CHECKPOINT

Checkpoint 1:
Introduction to Gazebo

Launch Project

Request Evaluations
0 of 3 requests used

A graphic for 'Checkpoint 1: Introduction to Gazebo'. It features a central blue robot-like figure on a circular platform. Surrounding the platform are several vertical bars of varying heights, some with icons like a gear, a lightbulb, and a person. The word 'CHECKPOINT' is written in large, bold, blue letters across the center of the graphic.

YOUR MARKS

After requesting a 1st evaluation, you will have the possibility to get the Checkpoint solution.
But be aware that ***once you check the solution, you will not be able to send your Checkpoint for grading anymore.***

The screenshot shows a web interface for a checkpoint. At the top, it says 'CHECKPOINT'. Below that, 'Checkpoint 1: Introduction to Gazebo'. There are two buttons: a pink 'Launch Project' button and a white 'Request Evaluations' button with '0 of 3 requests used' below it. To the right is a graphic with the word 'CHECKPOINT' and a person sitting on a globe. Below the buttons is a blue bar with a document icon and 'Open Evaluation Document'. Underneath is a grey box titled 'Get Checkpoint Solution' containing a red warning message: 'You will not be able to request re-evaluation after getting the solution'. Below the message, it says 'Type CHECKPOINT to confirm:' followed by a text input field with a vertical bar cursor and a blue 'GET SOLUTION →' button.

REAL ROBOT CONNECTION

In order to use the real robots, you need to first reserve a slot from the **RoboConnect app**:

Here you will have access to all the available **Real Robot Labs**.

REAL ROBOT CONNECTION

Starbots UR3e

CONNECT TO LAB (🔗)

👁 VISUALS & DESCRIPTION

● Starbots UR3e

Practice pick-and-place tasks with a robotic arm handling coffee cups.

Located in Barcelona 

Just **select** the desired robot **and book** the time slot that suits you better.

BOOK YOUR CONNECTION

SELECTED ROBOT LAB

Starbots UR3e

Practice pick-and-place tasks with a robotic arm handling coffee cups.

SELECT CONNECTION TIME

01/09/2025 

Select Time 

CANCEL BOOKING

CONFIRM BOOKING

REAL ROBOT CONNECTION

Once your booking has been registered, you will be able to check it in the **Bookings** section:

To connect to the real robot, you must be inside a Rosject. Once inside, you can see how long until your reservation starts by clicking the **Connect to Physical Robots** icon:

REAL ROBOT CONNECTION

Once your time slot arrives, the **Connect** button will turn green, indicating that you can now connect:

Once you connect to the real robot, every shell that you have running will get killed. So don't worry if your nodes or simulation go away, this means that the terminals are pointing now to the real robot instead of the virtual machine.

After clicking the connect button, you will see the camera streams appear along with a virtual joystick. Wait a few seconds until the middle circle of the joystick turns gray and move it to see if the robot moves.

If it does, it means **you are connected!** and are ready to get working.

FINAL PROJECT

- The Final Presentation of the project will be done on a **YouTube Live Stream**, with three experts of the team acting as evaluators:
 - **30 minutes for the presentation**
 - **15 minutes for Q&A from the experts**
- The Final Project will be based on the **Starbots Coffee** *(an automated cafetería environment which involves different robots)*. Several Project options will be available to choose between them.
- The Final Project selected will be discussed and agreed upon between the student and the tutor.
- Calls for the Final Project presentation will be open every month. So, in case you miss one, you have to wait 1 month for the next call.

DEADLINE

- The Masterclass has a maximum deadline of 24 months, including the inactive (subscription paused) periods.
- If you have not completed the Masterclass within this period, you will be kicked off the program.

COPYING POLICY

- The Masterclass has a very strict policy against copying. If we detect that any student has copied from another student, they will be immediately removed from the program.
- If you are struggling with any aspect of the course, we encourage you to seek help from instructors or peers rather than resorting to copying. The Masterclass is designed to support your growth, and we are here to help you succeed.
- We believe that true learning comes from personal effort and integrity. Copying undermines both your own progress and the integrity of the Masterclass community
